ABOUT

Senior Software Engineer with 6+ years of experience building high-scale backend systems across healthtech and fintech. Focused on backend platform engineering, data migration, and distributed systems.

SKILLS

Languages: Kotlin, Java, TypeScript
: Python, C++, C#

Databases: DynamoDB, PostgreSQL

Cloud & Infra: AWS, Pinpoint, EUS

: SES, EventBridge, Terraform,

Apache Pulsar, Apache Camel

Identity & Auth: Okta, OAuth 2.0, SSO

: RLS, MFA, FGA

Observability: New Relic, Datadog, Splunk

: Sentry, CloudWatch

Engineering: System Design, Design Patterns, Distributed Systems

Tooling: Jira, Confluence, Opsgenie

EDUCATION

Indian Institute of Technology, Roorkee, Roorkee, Uttarakhand 2016 – 2020

B.Tech, Chemical Engineering

CGPA: 7.28/10

Sadar Alam Memorial Secondary School, Nalanda, Bihar 2015
Twelfth

Percentage: 90.6/100

Jean Paul's High School, Ara, Bihar 2013
Tenth
CGPA: 10/10

EXTRA-CURRICULAR

Executive Member, NSS IIT Roorkee
2017–20

EXPERIENCE

Senior Software Engineer

Blink Health

Bengaluru, Karnataka

July 2025 – Present

- Migrated IVR service authentication from Google OAuth 2.0 to Okta OAuth 2.0, enabling seamless SSO across BlinkRx and VCO with zero production bugs post-release.
- Led OTP service migration to AWS-native infrastructure (Pinpoint/EUS/SES), achieving 5% improvement in OTP conversion rate and establishing first AWS EUS/SES implementation at Blink.
- Designed EventBridge and CloudWatch monitoring infrastructure for OTP service; documentation adopted as org-wide reference by other teams.
- Implemented Row-Level Security (RLS) proof-of-concept and reusable multi-tenancy SDK for RxOS flows – first RLS implementation at Blink – preventing unauthorized data access across tenant boundaries.
- Contributed to Ecomm Monolith deprecation, migrating database tables and services to modern backend and unblocking sign-in feature development.
- Built custom New Relic MCP server enabling natural language observability queries, adopted org-wide; combined with on-call automation, saves ~78 hours annually.

Software Engineer – 2

Toast

Bengaluru, Karnataka

Nov 2022 – July 2025

- Led KYC/KYB migration to Alloy by coordinating directly with external vendors on API specifications and workflows, improving auto pass rate from 40% to 80%.
- Automated bank account verification for merchants by integrating with Plaid via open banking integration, increasing verification success rate by 30%.
- Designed and implemented a data ingestion pipeline from DynamoDB to an internal data platform using Apache Pulsar. Defined topic structures, schemas, and Protobuf contracts.
- Migrated Worldpay APIs from v1 to v3 using a plug-and-play architecture with feature flag support, allowing seamless client integration without changes.
- Automated on-call workflows using Google Apps Script, reducing manual effort by 20%. Integrated Splunk, Opsgenie, and Jira to ensure SOX compliance.
- Led an initiative to stabilize flaky tests and optimize CI pipelines, resulting in a 25% reduction in build time.

Sr. Software Engineer

Bajaj Finance

Pune, Maharashtra

July 2020 – Oct 2022

- Built EMI Card sourcing service from the ground up as part of a monolith-to-microservice migration, handling 500 req/sec.

Joint Secretary, *Cognizance*, IIT
Roorkee 2018–19

Runner up, *CHESS Dept. Cricket* 2018

- Integrated Azure Application Insights and created automated alerting workflows using Power Automate, eliminating manual monitoring.
- Established CI/CD pipeline setup using Azure DevOps, enabling faster deployments and setting a blueprint for other teams.
- Developed internal NuGet library encapsulating observability metrics, standardizing logging and tracing across services.
- Created Angular-based dashboard to monitor and trace customer EMI card journey details for internal teams.

Intern

Flow Edge

Bengaluru, Karnataka

May 2019 – July 2019

- Developed a live reporting tool for company announcements by web scraping BSE using Selenium in Python.
- Built a GUI application using Tkinter to reconcile daily trade orders with user inputs.
